INSTALLATION

1. Go to the menu *Modules* → *Modules of your PrestaShop*

2. Click on *Add a new module* (on the top right corner)

3. Click on *Choose a file*

4. Select the *lgimagesregenerator.zip* file

5. Click on *Upload this module*

6. Find the *Regenerating Thumbnails - Regenerate your Images* module

7. Click on *Install*

8. Click on *Configure*

HOW TO USE THE MODULE

1. Select the type of pages for which you want to regenerate images

Select the type of pages

A dropdown menu with a light blue border and a downward arrow on the right. The current selection is 'Products'. The menu is open, showing a list of options: 'Products' (highlighted in blue), 'Categories', 'Manufacturers', 'Suppliers', 'Scenes', and 'Stores'.

2. Select the type of images you want to regenerate

Select the type of images to regenerate

A dropdown menu with a light blue border and a downward arrow on the right. The current selection is 'All'. The menu is open, showing a list of options: 'All' (highlighted in blue), 'cart_default', 'home_default', 'large_default', 'medium_default', 'small_default', and 'thickbox_default'.

3. Choose to replace or keep the old images

Delete previous images ☒ Yes ☐ No

Activate this option if you want to force the regeneration of all images. Desactivate this option if you want to regenerate only the images that don't exist.

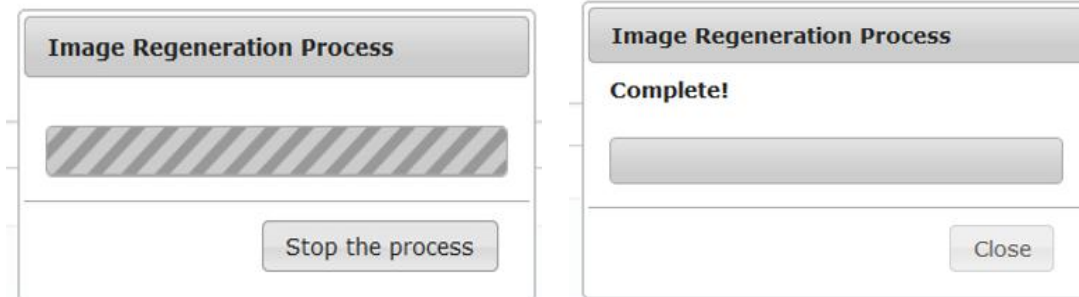

4. Write your email address to receive a confirmation by email each time the images are regenerated

Email of confirmation

5. Click on the button *Regenerate*

6. Wait until the module says Complete!

FAQ – COMMON ERRORS

1. My old pictures are not regenerated

Make sure to select the option “Delete previous images : Yes” to regenerate them (the module will force the regeneration of all the images).

If you desactivate this option, the module will only generate the images that don't exist.

2. The watermark don't appear on the regenerated images

As indicated on the product sheet, the module takes into account the watermark **from PrestaShop version 1.6.0.11** and all the following versions.

2.1. Make sure that the overrides are activated on your store

Go to the menu *Advanced parameters* → *Performances*

You should have this configuration:

2.2. Make sure that the override has been correctly created

The module creates an override of the “watermark” module on your FTP (path: “/override/modules/watermark/watermark.php”).

If the file is missing, you can copy manually the watermark.php file from:
/modules/limagesregenerator/override/modules/watermark/
and paste the watermark.php file inside the folder /override/modules/watermark/

YOUR OPINION

Please take the time to rate our module after buying it. This is quick, constructive for other PrestaShop users and it helps us develop our activity.
